FRND Android - Maestro Automation Report

Date: 5 Nov 2026 | **App:** com.dating.for.all.debug v2.368.0 (QA) | **Device:** Redmi A4 5G (24116RNC1I), HyperOS 2 / Android 15 | **Tool:** Maestro 2.12.1 | **Server:** QA

1. Summary

Test	Result	Time	Notes
Signup (new 78901xxxxx number, OTP 123456) -> Home	PASS x2 in a row	4m 36s	Set Profile, content language, declaration, app language, home popups
Login (existing number 7890134272) -> Home	PASS	2m 14s	One later run hit the Chat Bubbles dialog covering home - flow fixed
Bottom navigation (7 tabs)	PARTIAL	-	Connect, Forums, Live opened OK. FRND C..., Recents, Circle, Home not yet run (stopped on request)

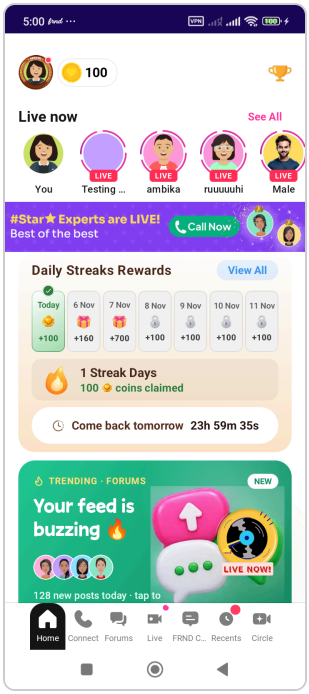

2. Issues found and fixes

#	Issue	Fix
1	Xiaomi blocks USB installs of the Maestro driver (`INSTALL_FAILED_USER_RESTRICTED`); first phone had no SIM so "Install via USB" / "USB debugging (Security settings)" could not be enabled	Switched to Redmi A4 with SIM. run.ps1 now installs the driver on-device and auto-taps the "Install via USB" popup, then runs Maestro with `--no-reinstall-driver`
2	Phone-number field randomly drops a digit (e.g. 7890134272 -> 780134272), Get OTP stays disabled	Paste instead of type; re-enter until the field matches exactly
3	Notification permission dialog appeared over App Language / home and swallowed taps	run.ps1 pre-grants all runtime permissions (notifications, location, mic, camera, media, contacts, phone, bluetooth) via adb - no Allow popups
4	Slow runs (5m+): every tap waited ~13 s for the UI to settle while the Streaks video / carousel animates	Capped tap settle wait to 0.3-0.5 s, merged permission checks, single fast loop to reach home
5	Streaks video sheet + CLAIM NOW + "I will try later" + Chat Bubbles popups cover home	home_popups subflow handles all, also while waiting for home
6	Forums tab opens full-screen (no bottom bar)	Tab step presses Back until bottom bar is visible

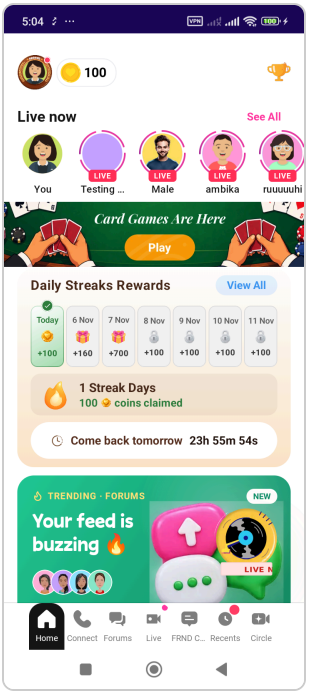

3. Test accounts (QA)

Phone	Type
7890134272	Created by automation signup, reused for login + navigation
7890131746	Earlier manual signup (emulator)

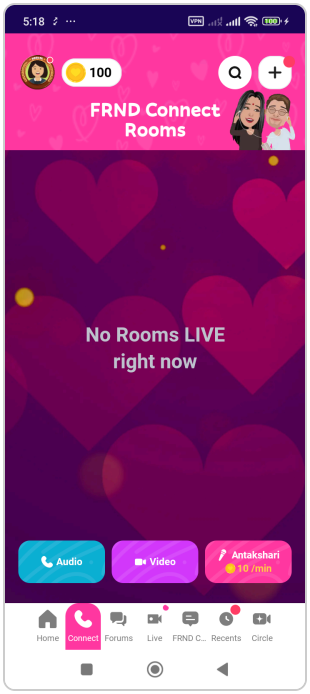

4. Screenshots

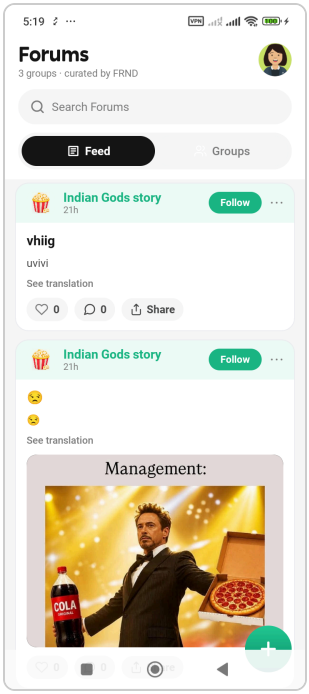

Signup -> Home (new user 7890134272)

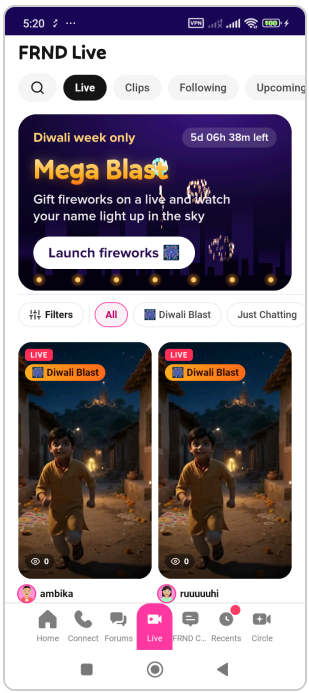

Login -> Home (existing user)

Tab: Connect

Tab: Forums

Tab: Live

5. Scripts (C:\frnd-maestro - open in Android Studio)

File	Purpose
run.ps1	Runner: clear data, pre-grant permissions, install driver, launch app, run Maestro, HTML report + video per run
flows/login_or_signup_check.yaml	QA -> login/signup -> home
flows/bottom_navigation.yaml	Login -> open all 7 bottom tabs -> back to Home
flows/subflows/*.yaml	select_qa_env, login_or_signup, signup, home_popups, allow_notifications, open_tab

Run: `.\run.ps1 flows\login_or_signup_check.yaml -Device 77478578` (signup) | add `-Phone 7890134272` for login | `.\run.ps1 flows\bottom_navigation.yaml -Device 77478578 -Phone 7890134272`

6. Next steps

1. Finish bottom navigation run (remaining 4 tabs) and confirm it passes twice.
2. Further speed-up needs a dev switch to disable the onboarding carousel / Streaks video auto-play in debug builds.
3. Visible and Hosting flows (not started).
