FRND Android - Maestro Automation Report

Date: 6 Nov 2026 | **Device:** Redmi A4 5G (HyperOS 2 / Android 15) | **App:** com.dating.for.all.debug v2.368.0 | **Server:** QA | **Repo:** github.com/sanjaysl-sl/NEWAUTOMATIONMCP

1. Results

Flow	Result	Time	Notes
Signup (new male) -> Home	PASS	4m 36s	Passed twice in a row (5 Nov)
Login (existing user) -> Home	PASS	2m 14s	5 Nov
Recharge success: 19 coins Rs 4 via Cashfree (OTP 111000, SUCCESS)	PASS	3m 33s	Coins credited +19 verified
Connect (PTR) screen buttons: Audio, Video, Antakshari	PASS	3m 09s	Rules dialog "I Agree" handled
Bottom navigation	4/5 PASS	-	Connect, FRND Chat, Recents, Circle OK; Home screenshot capture flaky
Recharge failed -> Try Again	FAIL (script)	3m 31s	Cashfree simulator now asks a mandatory "Failure Type" when FAILED is chosen; flow update needed
Female host Antakshari room	FAIL (script)	6m 10s	Female accounts land on Connect tab after login (not Home); flow update needed
New male: Experts LIVE banner + first-recharge offer (signup & sign-in)	FAIL (script)	5m 09s	Banner IS shown (see screenshot) but it is an image without text - check must use element id
Female signup (Girl + voice verification)	NOT RUN	-	Voice verification needs a real voice on the mic - needs QA bypass for 78901 numbers
Female host rights: Report / Remove / Block	NOT RUN	-	Needs a second (male) user to join the call

All "FAIL (script)" items are automation-side updates, not app bugs.

2. Observations for dev / product

#	Observation
1	Cashfree showed **SUCCESS (Paid INR 25.00)**, user pressed Back and answered YES to "Exiting payment?" - app showed **Payment Failed**. Please confirm this is expected (and that no money/coins are lost).
2	Bottom tabs changed between 5 Nov (Home, Connect, Forums, Live, FRND C.., Recents, Circle) and 6 Nov (Home, Connect, Circle, FRND Chat, Recents) - server-driven; flows now adapt.
3	Coupon KAUSHIK200 shows "Invalid coupon id" on the Rs 4 pack.
4	FRND Connect -> Random sometimes shows "We couldn't find any suitable matches".
5	Phone-number field intermittently drops a digit (Redmi A4) - automation re-enters until it matches.

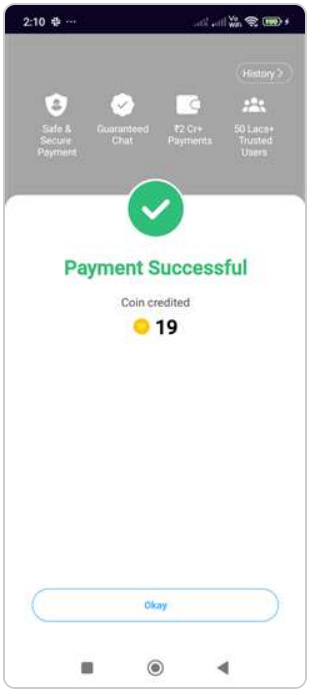

3. Manually recorded cases converted to automation

Recording	Flow(s)
PTR screen buttons + recharge	connect_screen_buttons, recharge_coin_pack, recharge_payment_failed
New male signup banner	new_male_banner (+ tools/run_new_male_banner.ps1 for signup & sign-in)
Female flow	female_signup, female_host_rights, female_host_antakshari

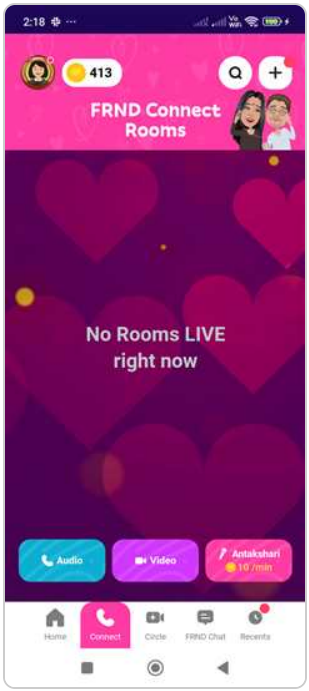

4. Screenshots

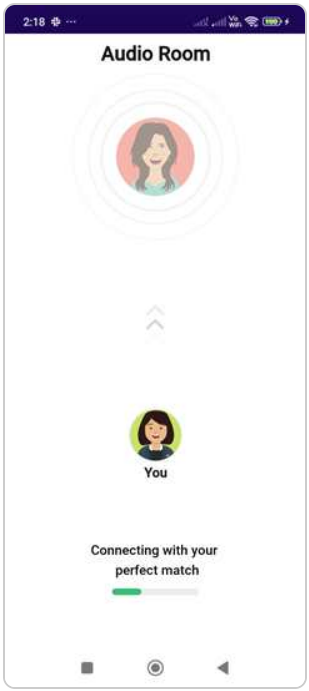

Cashfree simulator - OTP 111000 + SUCCESS

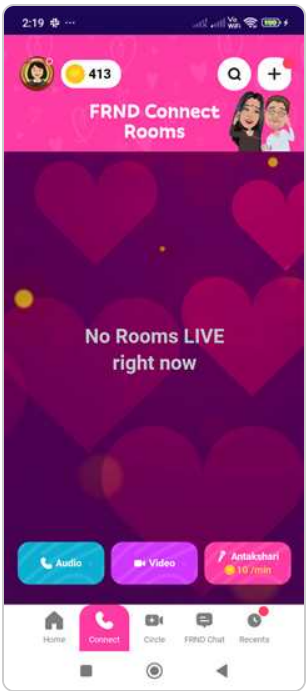

Recharge success - 19 coins credited

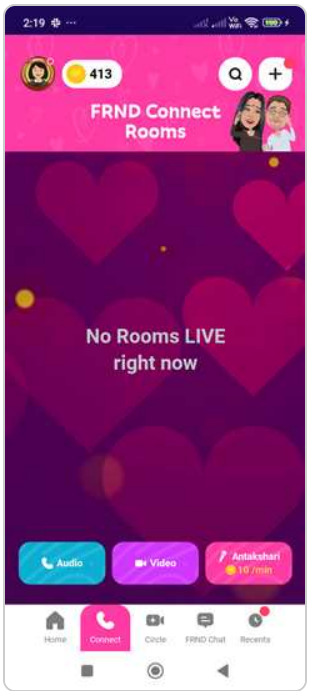

Connect screen

Connect - Audio

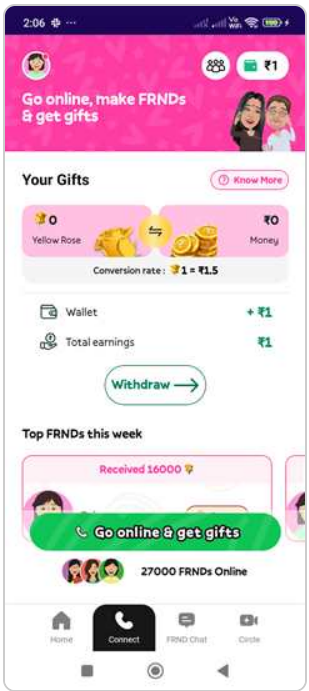

Connect - Video

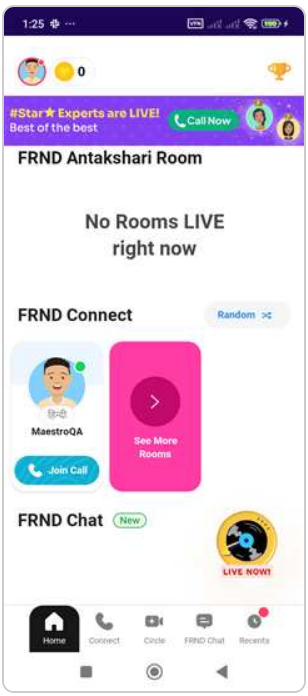

Connect - Antakshari

FAILED needs new 'Failure Type' field

Female lands on Connect tab after login

New male home - Experts LIVE banner

5. Next steps

1. Update recharge-failed flow to pick a Failure Type; female flows to accept the Connect landing tab; banner check by element id.
2. Decide: QA bypass for female voice verification, and a second device/emulator as the male joiner for host-rights.
3. Re-run full suite and confirm each flow passes twice.
